

CARDIAC ARREST ULTRASOUND

Phillip Andrus, MD, FACEP

Northern Westchester Hospital

Northwell Health®

The background of the slide is a dark, semi-transparent image of several US dollar bills. The bills are fanned out and overlapping, showing various denominations including \$100 and \$50 bills. The text "no financial disclosures" and "no conflicts of interest" is overlaid in a bright blue, sans-serif font. The text is centered and occupies the middle portion of the slide.

no financial disclosures
no conflicts of interest

A hand holding a red pencil is writing in a spiral-bound notebook. The notebook is open, showing two pages. The left page has some faint, illegible handwriting. The right page has the word "NOTES" written at the top, followed by a list of items. The first item is "(1) A spiral bound notebook is easier to keep handy than a stack of papers". The second item is "(2) A spiral bound notebook is easier to use in a car". The third item is "(3) A spiral bound notebook is easier to use in a car". The fourth item is "(4) A spiral bound notebook is easier to use in a car". The fifth item is "(5) A spiral bound notebook is easier to use in a car". The sixth item is "(6) A spiral bound notebook is easier to use in a car". The seventh item is "(7) A spiral bound notebook is easier to use in a car". The eighth item is "(8) A spiral bound notebook is easier to use in a car". The ninth item is "(9) A spiral bound notebook is easier to use in a car". The tenth item is "(10) A spiral bound notebook is easier to use in a car". The text "notes @ phillipandrus.com/arrest" is overlaid at the bottom of the image.

STANDSTILL

Outcome in Cardiac Arrest Patients Found to Have Cardiac Standstill on the Bedside Emergency Department Echocardiogram

MICHAEL BLAIVAS, MD, JOHN CHRISTIAN FOX, MD

	Electrocardiographic Asystole & Sandstill	PEA & Standstill	PEA & Contractions	VF & Standstill	VF & Contractions
Survived	0	0	12 (67%)	0	8 (53%)
Died	65 (100%)	20 (100%)	6 (33%)	51 (100%)	7 (47%)

*Standstill = sonographic asystole; PEA = pulseless electrical activity; contractions = mechanical contractions on echocardiogram; VF = ventricular fibrillation.

- **169 patients**
- **No survivors of cardiac standstill**

Emergency echocardiography to detect pericardial effusion in patients in PEA and near-PEA states☆

Vivek S. Tayal*, Jeffrey A. Kline

- **20 patients - no standstill survivors**

Does the presence or absence of sonographically identified cardiac activity predict resuscitation outcomes of cardiac arrest patients?

Philip Salen MD^{a,*}, Larry Melniker MD, MS^b, Carolyn Chooljian MD^c, John S. Rose MD^d, Janet Alteveer MD^e, James Reed PhD^a, Michael Heller MD^a

- **70 patients - no standstill survivors**

Bedside Focused Echocardiography as Predictor of Survival in Cardiac Arrest Patients: A Systematic Review

	ROSC (Positive Outcome)	No ROSC (Negative Outcome)
Cardiac contractility seen on echo (positive test)	98	92
No cardiac contractility seen on echo (negative test)	9	369

Study	Definition of Cardiac Activity
Bocka JJ, 1988 ¹¹	“Synchronous change in chamber diameter” or “synchronous change in the echocardiographic density of the myocardium”
Blaivas M, 2001 ¹	“Visible cardiac contractility”
Salen P, 2001 ¹²	Not defined. Mentions “contractions” in “Results” section.
Tayal VS, 2003 ²	“Presence of ventricular wall motion”
Salen P, 2005 ¹³	“Any detected motion within the heart: atrial, valvular or ventricular”
Schuster KM, 2009 ¹⁴	“Organized contractile activity with a decrease in chamber size”
Breitkreutz R, 2010 ¹⁵	“Cardiac motion”
Tomruk O, 2012 ⁶	Not defined
Bolvardi E, 2016 ¹⁶	“Presence of any heart activity including the ventricles, galleries, valves, etc”

REASON DEFINITION

Any visible movement of the myocardium, excluding movement of blood within the cardiac chambers or isolated valve movement

NO VISIBLE MOVEMENT

END-TIDAL CARBON DIOXIDE AND OUTCOME OF OUT-OF-HOSPITAL CARDIAC ARREST

ROBERT L. LEVINE, M.D., MARVIN A. WAYNE, M.D., AND CHARLES C. MILLER, PH.D.

TABLE 1. END-TIDAL CARBON DIOXIDE VALUES IN PATIENTS WHO SURVIVED TO HOSPITAL ADMISSION AND IN THOSE WHO DID NOT.

VARIABLE	NONSURVIVORS (N = 115)	SURVIVORS (N = 35)	P VALUE*
	mean \pm SD (range)		
Age (yr)	68.0 \pm 13.8 (31-95)	71.5 \pm 13.0 (27-90)	0.19
End-tidal carbon dioxide (mm Hg)†			
Initial	12.3 \pm 6.9 (2-50)	12.2 \pm 4.6 (5-22)	0.93
Final	4.4 \pm 2.9 (0-10)	32.8 \pm 7.4 (18-58)	<0.001

TABLE 2. END-TIDAL CARBON DIOXIDE VALUES IN PATIENTS WHO DIED IN THE HOSPITAL AND IN THOSE WHO SURVIVED TO DISCHARGE FROM THE HOSPITAL.

VARIABLE	DIED IN HOSPITAL (N = 19)	SURVIVED TO DISCHARGE (N = 16)*	P VALUE†
	mean ±SD (range)		
Age (yr)	76.8±6.9 (64–89)	65.2±15.7 (27–90)	0.009
End-tidal carbon dioxide (mm Hg)‡			
Initial	11.9±5.1 (5–20)	12.5±4.1 (7–22)	0.68
Final	31.8±7.3 (18–56)	34.0±7.7 (24–58)	0.28

US-GUIDED CARDIAC ARREST RESUSCITATION

SUMMARY

Optimizing Cardiac Arrest Care with Ultrasound

1. use the **REASON** definition of cardiac activity
2. Pseudo-PEA = **profound shock**
3. Be vigilant for **confounders** when assessing cardiac activity

Optimizing Cardiac Arrest Care with Ultrasound

4. You **can use cardiac standstill** to terminate resuscitation.
5. Use ultrasound to search for **reversible etiologies** in these patients.
6. Use presence of **thrombus** rather than chamber size comparison to assess for PE.

CARDIAC ARREST ULTRASOUND

7. To assess CPR Quality learn to use **resuscitative TEE**
8. **Dichotomize** your diagnostic search
9. An **algorithmic** approach will minimize interruptions to CPR

***THAT'S CARDIAC ARREST
ULTRASOUND, FOLKS!***
